

Contributing planes

Posted by astute - 2008/11/29 21:50

Hi Everyone

Can anyone tell me how to identify the contributing planes for each stream like which is left , right and top. Its bit confusing for me.

If I am right, In AGWA it designates sides planes as (-1,0 null). In that case, Kindly tell me whether my interpretation as below is right.

-1- left side contributing plane

0 -right side contributing plane

Null- top plane

Thank you in Advance.

Hi Christian,

You interpretation is nearly correct but backwards for left and right. The left and right sides of a stream are determined from the perspective of looking downstream. So, that results in the following:

0 is left side lateral element

-1 is right side lateral element

null is upland
